RUBRIC: Virtual Machine Setup (Ubuntu Desktop)

Activity: Create, Configure, and Install Ubuntu Desktop on a Virtual Machine

Total Points: 100

Criteria	Excellent (100%)	Proficient (75%)	Developing (50%)	Incomplete (0%)	Score
VM Type & Version (10 pts)	Correctly selects Ubuntu (64-bit) as the OS type and version. Matches the downloaded ISO architecture.	Selects correct type but wrong version (e.g., 32-bit instead of 64-bit) — VM still works.	Selects wrong OS type entirely (e.g., "Other Linux") — needs correction.	Fails to select any valid OS type; cannot proceed.	/10
Memory (RAM) Allocation (15 pts)	Allocates 4-8GB RAM as required. Understands the host system limitation.	Allocates 3GB – 3.5GB (sufficient but slightly below requirement).	Allocates 2GB or less — causes severe lag or installation failure.	Allocates no RAM or invalid value.	/15
Processor (CPU) Allocation (15 pts)	Allocates 4 CPU cores with 100% execution cap. Enables PAE/NX if available.	Allocates 2 cores but does not adjust execution cap or nested VT x settings.	Allocates only 1 core — installation takes extremely long.	Fails to configure processor settings.	/15

Hard Drive (Storage) Setup (20 pts)	Allocates 100 GB dynamically allocated storage (or fixed). Created a partitioning in drive.	Allocates 25GB but chooses wrong disk format (e.g., VHD) — still functional.	Allocates less than 20GB — insufficient for installation.	No hard drive created; VM cannot boot.	/20
ISO Attachment & Boot Order (15 pts)	Correctly attaches the Ubuntu Desktop ISO to the optical drive. Sets boot	Attaches ISO but forgets to adjust boot order — manually boots	Attaches ISO but boot order wrong — VM boots to blank screen.	Fails to attach ISO; VM cannot install.	/15

	order: Optical → Hard Disk .	via "Force BIOS" first time.			
Proper Installation Execution (25 pts)	Completes full installation: partitioning ("Erase disk"), user setup, timezone, keyboard. No errors. Reboots successfully into GUI.	Completes installation but makes minor errors (e.g., wrong timezone — fixes later).	Installation starts but fails midway (partitioning error, corrupt ISO, or power loss).	Installation not attempted or aborted.	/25

TOTAL SCORE: ____ / 100

DOCUMENTATION REQUIREMENT

Student Name: Lance Micahel C. Lloren

Date: Aug 27, 2026

VM Name: Lloren Vm

1. VM Specifications Summary

Component Allocated Value

VM Type / OS Ubuntu (64-bit)

RAM 7 GB (7567 MB)

CPU Cores 4

Hard Drive Size 100GB (Dynamic / Fixed) Storage

Controller SATA / SCSI

Network Adapter NAT / Bridged

ISO File Used ubuntu-26.04-desktop-amd64

2. Step-by-Step Setup Process

Create Virtual Machine

Virtual machine Name and Operating System

Please choose a descriptive name and destination folder for the new virtual machine. The name you choose will be used throughout VirtualBox to identify this machine. Additionally, you can select an ISO image which may be used to install the guest operating system.

Name: ✓

Folder:

ISO Image:

Edition:

Type:

Version:

☐ Skip Unattended Installation

No ISO image is selected, the guest OS will need to be installed manually.

Create Virtual Machine

Unattended Guest OS Install Setup

You can configure the unattended guest OS install by modifying username, password, and hostname. Additionally you can enable guest additions install. For Microsoft Windows guests it is possible to provide a product key.

Username and Password

Username: ✓

Password:

Repeat Password:

☐ Guest Additions

Guest Additions ISO:

Additional Options

Product Key:

Hostname: ✓

Domain Name:

☐ Install in Background

Help Back Next Cancel

The image shows two VirtualBox setup windows. The first sets the virtual machine name and OS (Lloren-VM, Linux, Oracle Linux 64-bit). The second configures unattended installation, showing username, password, hostname, and domain settings for the guest OS.

Create Virtual Machine

Hardware

You can modify virtual machine's hardware by changing amount of RAM and virtual CPU count. Enabling EFI is also possible.

Base Memory: 7567 MB

Processors: 4

☐ Enable EFI (special OSes only)

Help Back Next Cancel

Create Virtual Machine

Virtual Hard disk

If you wish you can add a virtual hard disk to the new machine. You can either create a new hard disk file or select an existing one. Alternatively you can create a virtual machine without a virtual hard disk.

☒ Create a Virtual Hard Disk Now

Disk Size: 100.00 GB

☐ Pre-allocate Full Size

☐ Use an Existing Virtual Hard Disk File

VM-PESCADOR.vdi (Normal, 50.00 GB)

☐ Do Not Add a Virtual Hard Disk

Help Back Next Cancel

The first configures hardware settings, adjusting memory (7567 MB) and CPU count (12 CPUs). The second sets up a virtual hard disk, with options to create, use, or skip a disk; the selected choice creates a 100 GB virtual disk.

The image shows two VirtualBox "Summary" windows displaying the final configuration for creating a virtual machine named Lloren-VM. The summary lists details such as OS type (Ubuntu 64-bit), username, hostname, memory (7567 MB), processor count, and disk size (100 GB).

The image shows the Oracle VM VirtualBox Manager interface with several virtual machines listed. The selected VM, Lloren-VM, is shown as running with details such as memory (7674 MB), storage (20 GB), and network configuration. Below, another window displays the startup process of the same VM, with a black screen indicating that the system is still loading or booting up. (waiting po ito after i finish ng set up)

The first screen welcomes the user to Ubuntu and asks to choose a language, with English selected.

The second screen presents accessibility options, allowing customization for seeing, hearing, typing, pointing and clicking, and zooming before continuing the setup

The top screen prompts the user to connect to the internet, offering options for wired connection, no Wi-Fi devices detected, or skipping internet setup.

The bottom screen asks the user to select a keyboard layout, with English (US) chosen and a test box displaying the word "hello."

The top screen asks, *“What do you want to do with Ubuntu?”* with options to Install Ubuntu or Try Ubuntu,

The bottom screen shows *“Type of installation”*, offering choices for Interactive installation, Automated with autoinstall file, and Automated with Landscape

The first screen titled “*Optimise your computer*” asks whether to install recommended proprietary software, offering checkboxes for third-party drivers (graphics and Wi-Fi) and additional media formats (MP3, MP4, MOV, etc.). (Hindi muna ako pumili since sabi ni sir pwede i skip since matatagan ang install)

The second screen titled “*Applications*” asks “*What apps would you like to install to start with?*” and provides two choices: Default selection (minimal apps and browser) and Extended selection (full suite with office tools and utilities).

The top screen asks *“How do you want to install Ubuntu?”* with two options: Erase disk and install Ubuntu (which deletes all existing data) and Manual installation (for advanced users customizing partitions). The manual option is selected.

The bottom screen displays the manual partitioning interface, showing available free space and a dialog box to create a partition with parameters like size (20 GB), file system (Ext4), and mount point (/ - OS).

The top screen displays the manual partitioning step, where a partition is being edited. The partition size is set to 20001 MB, formatted as Ext4, and mounted at /boot. This step customizes how disk space is allocated for the operating system.

The bottom screen shows the account creation setup. The user enters their name (lloren), computer name (lloren-VirtualBox), username (lloren), and password. The option "Require my password to log in" is checked, ensuring secure access.

The top screen displays the timezone selection step. The map highlights the Philippines. The bottom screen shows the “Ready to install” summary, reviewing installation choices such as manual installation, default applications, and disk partitions (Ubuntu 20.04 on `/` and `/boot`, both formatted as Ext4).

The top screenshot captures the installation progress screen with the message *“Fast, free and full of new features”* while files are being copied. This indicates Ubuntu is actively installing and setting up system components.

The bottom screenshot shows the Ubuntu desktop after installation, featuring the purple background, side dock with app icons (like Firefox and Files), and an open terminal window ready for commands.

3. Issues Encountered & Resolutions

(List any problems during setup and how you fixed them.)

The image is a composite of three parts. The top-left part is a terminal window titled 'PowerShell - Check VM Situation' showing a Windows 10 installation log. The log includes details about the installation path, hardware configuration (CPU, RAM, disk), and a critical error: 'Code 0xc0000001: Unable to access opcode bytes at 0xffffffffffffdfe.' The top-right part is a large, light blue rectangular area with the word 'Solution' in a bold, black font. The bottom-left part is another terminal window showing the command 'wsl --shutdown' being executed. The bottom-right part is a screenshot of the Windows 10 installation screen, which displays a 'System problem detected' message with a red warning icon and a question mark. The message states: 'An error occurred during the installation of Windows 10. The system cannot find the path specified. Please check the system files and restart the installation.' The bottom-right corner of the entire image features a small navigation bar with icons for home, search, and other system functions.
